

Replication Code for:
A Little Lift in the Iron Curtain: Emigration Restrictions
and Criminal Activity in Socialist East Germany

Hans Lueders

June 5, 2025

Load and prepare data

Notes: The replication files contain three datasets:

1. “county-level data” is a panel data set with all relevant variables used in analyses at the county-year-level. See below for details.
2. “crime-level data” contains detailed information about individual crimes committed in the former GDR. This data was compiled from original files obtained from the German Federal Archives. It is used to create descriptive statistics and in the analysis of crime damage.
3. “additional data” contains annual information on the volume of exit visa applications, international migration to and from the former GDR, and government expenditures. This data is used to create several descriptive statistics in the main text and the appendix.
